Last updated: Oct 29, 2026

I am currently serving as a First Lieutenant in the Republic of Korea Army and working as a research officer at the Agency for Defense Development, the Korean counterpart to the U.S. DARPA. Previously, I completed my bachelor's degree in Computer Science at DGIST.

WHAT I STRIVE FOR

I want to be someone who is skilled in both **research and engineering**.

During my undergraduate years, I focused on building a strong foundation in computer science. I then worked as a Computer Vision Engineer at QUESTER, where I gained hands-on experience developing real products. This taught me that while integrating different technologies into a working system is important, **the performance of a single key component can make a huge difference in a product's competitiveness**. This experience sparked my interest in not just applying existing technologies, but improving the technologies themselves. I went on to conduct research in computer vision and publish a research paper.

My goal is to **identify real problems in industry, develop the core technologies needed to solve them, and design systems that bring those technologies together into working products**. I want to keep growing as both a researcher and an engineer, with the ability to dive deep into individual technologies while also seeing the bigger picture.

Recently, I've been exploring fields beyond computer vision, including robotics, LLM agents, and circuit design automation. I regularly read research papers and conduct my own research to expand my knowledge across different areas. I also participate in hackathons across various fields to better understand the challenges people face in the real world. **Rather than limiting myself to a single field, I want to take on any problem worth solving.**

RECENT RESEARCH INTERESTS

I'm interested in making AI agents more capable so they can solve challenging research problems across any field. I want to build agents that can learn from experience, reflect on their failures, and tackle increasingly complex tasks.

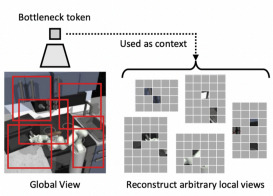

For example, I'm interested in designing self-reflection loops to improve the success rates of coding agents. In robotics, I'm also interested in using world models like Genie to let agents gain experience in virtual environments and apply what they learn to improve their performance in the real world.

RECENT ENGINEERING INTERESTS

I'm interested in automating all kinds of work. I enjoy building everything from simple rule-based systems to AI agents that can handle complex tasks and workflows.

I'm especially interested in automating not just repetitive administrative tasks, but also professional work in areas like accounting, law, and HR. I want to work closely with experts in these fields to understand their workflows and find better ways to automate them.

EDUCATION

DGIST (Daegu Gyeongbuk Institute of Science and Technology) Mar 2021 – Feb 2025

B.S. in Computer Science and Engineering · GPA 4.12 / 4.30 (CS: 4.26 / 4.30) · 3rd among all graduates (Feb 2025)

UCLA (University of California, Los Angeles) Jun 2022 – Aug 2022

Electrical Engineering (Summer Session, via DGIST FGLP Program) · GPA 4.0 / 4.3 · Selected as Outstanding Participant

EXPERIENCE

First Lieutenant / Research Officer for National Defense · Agency for Defense Development (ADD) — Jun 2025 – May 2028

- Selected as one of 20 research officers nationwide dedicated to science-and-technology R&D for national defense.
- ADD is a government research institute responsible for developing advanced defense technologies and weapon systems for South Korea's military.
- I currently work on computer vision research at ADD. Due to security restrictions, I cannot share further details about my work.

Sole Computer Vision AI Researcher · QUESTER — Mar 2024 – Mar 2025

- Led the development of a computer vision-based hand-tracking glove, from data collection and model design to deployment. Built a C++ pipeline for object detection, segmentation, tracking, and stereo matching.
- Recognized as Samsung C-Lab Outside 6th cohort; received the 2025 CES Innovation Award and presented the technology in person at CES 2025 in Las Vegas.

Graph Neural Network Research Intern · Universität Ulm — Jun 2024 – Aug 2024

Advisor: Prof. Ansgar Scherp

- Conducted research on few-shot graph node classification at Universität Ulm, Germany.

AI Safety Research Intern · HASS LAB — Dec 2022 – Jan 2024

Advisor: Prof. Baekgyu Kim

- Developed several games using Unreal Engine.
- Built an autonomous RC car/drone that follows a specific person.
- Built a lab website for undergraduate students, which was adopted as the lab's official webpage and is still in use. My projects at the lab are also documented there.

View my projects on the lab website →

LEADERSHIP & COMMUNITY ACTIVITIES

Peer Counselor Representative · DGIST — Jan 2022 – Dec 2022

- Helped around 20 freshmen adjust to university life as a Peer Counselor and served as the representative of all Peer Counselors.
- Organized the first-ever sports event for Peer Counselors and led the creation of the DGIST Encyclopedia to help new students navigate university life.

External Events Team Member · DGIST Student Council — Mar 2023 – Dec 2023

- Collaborated with student councils from other universities to organize joint events, including hackathons and STadium, an inter-university sports competition among science and technology institutes.

Executive Member, Digiroid · DGIST Programming Club — Sep 2021 – Dec 2023

- Organized and led study groups on Python, web development, and algorithms.
- Taught weekly classes on artificial intelligence and autonomous drone development to junior students throughout 2023.

Volunteer Instructor · Songdo High School (Alma Mater) — Dec 2022 – Present

- Invited back to my high school to teach AI and Arduino workshops every year in recognition of my dedication as a student.
- Design and deliver hands-on lessons tailored to high school students, teaching around 30 students per session.

AWARDS

CES Innovation Award · CES — 2025

Awarded at CES 2025 as part of QUESTER for innovation in hand-tracking glove technology with computer vision.

Chairman's Award · DGIST — 2025

Awarded at graduation to a student who demonstrates academic excellence and makes meaningful contributions to fellow students. During my studies, I helped junior students by giving lectures on course material and other topics. At UCLA, I also organized coding sessions for classmates who needed help with programming. In addition, I built a system to help junior students prepare for the Research Officer selection interview, which is still being used successfully today.
